CO4 AT2 Q3

Q3 two types of Applets

25 marks

Create two types of Applets: a) Stand-alone Applet b) HTML embedded Applet. Demonstrate both and explain the differences.

CODE:

```
import javax.swing.*;
import java.awt.*;
import java.awt.event.*;

public class AppletDemo extends JFrame {

    JButton standaloneButton;
    JButton embeddedButton;

    AppletDemo() {

        setTitle("Java Applet Demonstration");
        setSize(500, 350);
        setLayout(new FlowLayout(FlowLayout.CENTER, 20, 30));
        setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);

        JLabel title = new JLabel("JAVA APPLET DEMONSTRATION");
        title.setFont(new Font("Arial", Font.BOLD, 20));

        standaloneButton = new JButton("Stand-alone Applet");
        embeddedButton = new JButton("HTML Embedded Applet");
```

```

standaloneButton.setPreferredSize(new Dimension(180, 40));
embeddedButton.setPreferredSize(new Dimension(180, 40));

add(title);
add(standaloneButton);
add(embeddedButton);

standaloneButton.addActionListener(new ActionListener() {
    public void actionPerformed(ActionEvent e) {
        showStandaloneApplet();
    }
});

embeddedButton.addActionListener(new ActionListener() {
    public void actionPerformed(ActionEvent e) {
        showEmbeddedApplet();
    }
});

setLocationRelativeTo(null);
setVisible(true);
}

// Stand-alone Applet demonstration
void showStandaloneApplet() {

    JFrame frame = new JFrame("Stand-alone Applet");

    frame.setSize(450, 300);
    frame.setLayout(new FlowLayout());

```

```
JPanel panel = new JPanel();
panel.setPreferredSize(new Dimension(400, 200));
panel.setBorder(BorderFactory.createLineBorder(Color.BLUE, 2));

panel.setLayout(new GridLayout(3, 1));

JLabel heading = new JLabel(
    "STAND-ALONE APPLET",
    JLabel.CENTER
);

JLabel message = new JLabel(
    "This applet runs independently.",
    JLabel.CENTER
);

JLabel method = new JLabel(
    "It is represented here using Swing.",
    JLabel.CENTER
);

heading.setFont(new Font("Arial", Font.BOLD, 18));

panel.add(heading);
panel.add(message);
panel.add(method);

frame.add(panel);

frame.setLocationRelativeTo(null);
frame.setVisible(true);
}
```

```
// HTML Embedded Applet demonstration
void showEmbeddedApplet() {

    JFrame frame = new JFrame("HTML Embedded Applet");

    frame.setSize(550, 400);
    frame.setLayout(new BorderLayout());

    // Simulated HTML page
    JPanel htmlPage = new JPanel();
    htmlPage.setLayout(new BorderLayout());

    JLabel htmlTitle = new JLabel(
        "HTML WEB PAGE",
        JLabel.CENTER
    );

    htmlTitle.setFont(new Font("Arial", Font.BOLD, 20));

    JLabel htmlText = new JLabel(
        "The following area represents an embedded applet:",
        JLabel.CENTER
    );

    // Embedded applet area
    JPanel appletArea = new JPanel();
    appletArea.setLayout(new GridLayout(3, 1));
    appletArea.setBorder(
        BorderFactory.createTitledBorder(
            "Embedded Applet Area"
        )
    )
}
```

```
);
```

```
JLabel appletTitle = new JLabel(  
    "HTML EMBEDDED APPLET",  
    JLabel.CENTER  
);
```

```
JLabel appletMessage = new JLabel(  
    "This applet is embedded inside a webpage.",  
    JLabel.CENTER  
);
```

```
JLabel appletInfo = new JLabel(  
    "Applet Content",  
    JLabel.CENTER  
);
```

```
appletTitle.setFont(  
    new Font("Arial", Font.BOLD, 18)  
);
```

```
appletArea.add(appletTitle);  
appletArea.add(appletMessage);  
appletArea.add(appletInfo);
```

```
htmlPage.add(htmlTitle, BorderLayout.NORTH);  
htmlPage.add(htmlText, BorderLayout.CENTER);  
htmlPage.add(appletArea, BorderLayout.SOUTH);
```

```
frame.add(htmlPage);
```

```
frame.setLocationRelativeTo(null);
```

```
        frame.setVisible(true);  
    }  
  
    public static void main(String[] args) {  
        new AppletDemo();  
    }  
}
```
