Q1 Find square

25 marks

Design an Applet that accepts a number from the user and displays its square when a button is clicked. Use AWT controls and appropriate event handling.

CODE:

The screenshot shows an IDE with three tabs: Main.java 2, HospitalAppointmentSystem.java 5, and FindSquare.java 4. The active tab is FindSquare.java, which contains the following code:

```
FindSquare.java > Java > FindSquare > actionPerformed(ActionEvent e)
1  import java.awt.*;
2  import java.awt.event.*;
3  public class FindSquare extends Frame implements ActionListener {
4      Label l1, l2;
5      TextField t1, t2;
6      Button b1;
7      FindSquare() {
8          setTitle(title: "Find Square");
9          setSize(width: 400, height: 250);
10         setLayout(new FlowLayout());
11         l1 = new Label(text: "Enter Number:");
12         t1 = new TextField(columns: 15);
13         b1 = new Button(label: "Find Square");
14         l2 = new Label(text: "Square:");
15         t2 = new TextField(columns: 15);
16         t2.setEditable(b: false);
17         add(l1);
18         add(t1);
19         add(b1);
20         add(l2);
21         add(t2);
22         b1.addActionListener(this);
23         addWindowListener(new WindowAdapter() {
24             public void windowClosing(WindowEvent e) {
25                 dispose();
26             }
27         });
28         setLocationRelativeTo(c: null);
29         setVisible(b: true);
30     }
31     public void actionPerformed(ActionEvent e) {
32         try {
33             int n = Integer.parseInt(t1.getText());
34             int square = n * n;
35             t2.setText(String.valueOf(square));
36         } catch (NumberFormatException ex) {
37             t2.setText(t: "Invalid Number");
38         }
39     }
40     public static void main(String[] args) {
41         new FindSquare();
42     }
43 }
```

At the bottom of the IDE, there is a status bar with the text "Run main | Debug main | Run | Debug" and "Connect Indexing completed. Java: Ready".

OUTPUT:
